

Hasan Sawaed

Senior iOS Engineer

hasansa007@gmail.com · +972 54 254 5288 · linkedin.com/in/hasansa007

SUMMARY

Senior iOS Engineer with 13+ years of experience building and shipping iOS applications. Specialized in Swift, SwiftUI, modern iOS architecture, and performance optimization.

CORE SKILLS

Languages	Swift · Objective-C
Frameworks	SwiftUI · UIKit · Combine · Swift Concurrency
Architecture	TCA · Modular Architecture · Swift Package Manager (SPM)
Quality	XCTest · Instruments (Allocations, Time Profiler)
Delivery	App Store Connect · TestFlight

PROFESSIONAL EXPERIENCE

Senior iOS Engineer · Shutterfly, Haifa, Israel

2017 – Present

- Built the APC photo scoring engine — a batching and queuing pipeline that scans the user's photo library, runs Core ML predictions, and uploads ranked results to drive the personalization flow.
- Built the APC personalization flow and SwiftUI home screen — consuming ranked photo results to generate product suggestions and surface rendered previews to the user.
- Owned the stability of the photo processing pipeline — monitored production crashes via Crashlytics and logging systems, traced and resolved the underlying defects.
- Established a feature-based modularization workflow using SPM — each new feature scoped as a package with explicit dependency declarations, either extracted from an existing module or created as a new one.

iOS Engineer — SDK & Interactive Media · Apester

2015 – 2017

- Designed and shipped the Apester iOS SDK enabling publishers to embed interactive units (polls, quizzes, real-time feeds); optimized rendering performance under high-frequency feed updates.
- Defined the SDK's public API surface and versioned release process.

iOS Engineer — Indoor Navigation · Spreo

2013 – 2015

- Built iOS applications for indoor navigation across hospitals, campuses, and malls — working with facility data structures including floors, coordinates, and areas of interest (AOIs).
- Integrated BLE beacon signals and proprietary navigation algorithms to determine user location and drive turn-by-turn navigation to specific floors and AOIs.
- Built the map display layer including route rendering across outdoor-to-indoor and indoor-to-indoor transitions, floor changes, and real-time position updates — GPS for facility identification, BLE for indoor positioning.

INDEPENDENT PRODUCTS

Irtiqaa — Personal Growth System for Goals, Habits, and Consistency

Live on App Store · iOS & Android · Swift · Kotlin · KMP · TCA

- Sole owner across product, engineering, and both App Store and Google Play submissions — taken from concept to production independently.
- Designed the application architecture and data model from scratch, including local persistence and synchronization across iOS and Android.
- Built and shared business logic across iOS and Android using Kotlin Multiplatform — domain models, validation rules, and data operations written once and consumed natively on both platforms.
- Leveraged AI-assisted development workflows to accelerate implementation across iOS and Android.

EDUCATION

B.Ed, Software & Electronics — ORT Colleges · 2010–2013

Mobile Application Development (iOS & Android) — John Bryce · 2011–2013
