

Hasan Sawaed

iOS Developer

hasansa007@gmail.com · +972 54 254 5288 · linkedin.com/in/hasansa007

SUMMARY

iOS developer specialized in Swift and SwiftUI — storage, caching, threading, and performance for consumer applications at scale — with daily, hands-on use of AI tools across the development lifecycle. Independently shipped three products from 0 to production, including an AI-powered full-stack platform.

CORE SKILLS

Languages	Swift · Objective-C · Kotlin (KMP)
Frameworks	SwiftUI · UIKit · Combine · Swift Concurrency
Platform	Storage · Caching · Threading · REST / JSON · Performance optimization
Architecture	Modular Architecture · SPM · TCA · Clean, reusable components
AI Tooling	AI-assisted development workflows · LLM pipeline design (production)
Quality & Delivery	XCTest · Instruments · Git · App Store Connect · TestFlight · CI/CD

EXPERIENCE

iOS Engineer · Shutterfly, Haifa, Israel

- Built the APC photo scoring engine — a batching/queuing pipeline with threading and caching, running Core ML predictions over the user’s photo library.
- Built the APC personalization flow and SwiftUI home screen — product suggestions driven by ranked photo results.
- Owned production stability — Crashlytics monitoring, root-cause fixes.
- Established feature-based modularization with SPM — clean, reusable components.

Earlier iOS roles

- Apester** — designed and shipped a publisher-facing iOS SDK; public API and versioned releases.
- Spreo** — indoor-navigation iOS apps: BLE positioning, real-time routing.

INDEPENDENT PRODUCTS

StudyHub — AI Course-Generation Platform · *studyhub.academy* · *Next.js* · *Python* · *Postgres* · *Supabase* · *Railway*

- Sole engineer, concept → production (studyhub.academy): AI pipeline turning lecture recordings into a complete course — transcription, summaries, exams, flashcards — in Arabic, Hebrew, and English.
- 9-stage LLM pipeline behind a model-agnostic gateway — JSON-schema outputs, self-healing recovery, spend caps; durable Postgres job queue with auto-resume.

Modu — Goals & Habits App · *Live on App Store* · *iOS & Android* · *Swift* · *Kotlin* · *KMP* · *TCA*

- Sole owner, concept to production on both stores — local persistence, cross-platform sync, KMP-shared business logic.

Sonic Player — Native Audio Engine · *Live on App Store* · *SwiftUI* · *TCA* → *Clean Architecture* · *AVFoundation*

- Background playback, variable speed, lock-screen controls, Now Playing; migrating from TCA to Clean Architecture.

EDUCATION

- B.Ed, Software & Electronics — ORT Colleges · Mobile App Development (iOS & Android) — John Bryce
